November 5, 2024

Another gala. Another speech about "The Future of Engineering." I felt like a ventriloquist's dummy. I'm repeating phrases I wrote three years ago and everyone is still clapping like it's gospel. I'm terrified that if I stop moving, the whole tower of cards collapses. But what else can I do? It's not like I can just stop moving... right?

The investors are rabid. They keep demanding that I 'moe on to new horizons for the company' - they sent another email about it today... I don't know how long I can puh back before I loose my mind...

October 22, 2024

The "Boy Wonder" is aging out. The tech blogs are starting to ask why Brighthouse hasn't filed a new patent in eighteen months. I snapped at my CTO today because he asked for my notes on the propulsion cooling system. I don't have notes. I have a headache that won't quit. I wonder if they can smell the desperation on me.

September 14, 2024

The board is expecting the "Next Horizon" specs by Q4. I sat in the lab for six hours today staring at a blank CAD file. My hands were shaking. I used to see patterns in the data—now it's just noise. I told the lead engineers I was "ruminating on the architectural philosophy," but the truth is, I've got nothing. I'm empty.

November 19, 2024

Brighthouse stock dipped 4% because of the "innovation lag" rumors. I should care, but I'm paralyzed. I spent the afternoon hiding in the private lounge drinking scotch and pretending to read schematics. I have zero ideas left. I'm a dry well. I think Albert knows. He's been quiet—quieter than usual. Or maybe I'm just becoming paranoid. Everyone is looking at me, waiting for the spark. There is no spark. But there may be another option...
